Right / wrong
Numeracy is a human activity
Numeracy is functional and highly practical
Common European Numeracy Framework

• Two serious challenges
• Context: Developing CENF in Erasmus+
• Theoretical underpinning / choices
• Overview of the construct
• Awareness, cooperation and dissemination
Two serious challenges

- Awareness of the importance of numeracy for personal empowerment and for societal and economic development.

- “Too many European citizens lack the necessary numeracy competencies to participate autonomously and effectively in our technologized and number-drenched society and consequently many citizens are overlooked for certain jobs and have problems in their daily life, dealing with the abundance of number-related issues (OECD, UNESCO, EU)”.

- The amounts of citizen with low numeracy across Europe.
Developing the CENF in Erasmus+

• Policy input
  • The 2019 European Numeracy Survey across Europe (UL, Ireland)
  • Personal en professional networks around adult numeracy education

• Theoretical input
  • Systematic Literature Review on Numeracy (UB, Spain)
  • Existing supranational frameworks
    • PIAAC (1st and 2nd cycle) / PISA 2015, 2021 (OECD)
    • Principles and Standards (NCTM, USA)
    • ACARA, Australia

• Empirical Input
  • Professional development modules and trials (BFI, Austria)
Theoretical underpinning

• Numeracy is basic arithmetic (1950-1975)
• Numeracy is subset of mathematics (1975-2000)
• Numeracy is subset of literacy, namely numerical literacy (UNESCO)
• Numeracy must be seen as numerate behaviour (1990 - ...)
  • ALL, IALS, PIAAC assessment frameworks
• Numeracy as social practice (2000 - ...)

Common European Numeracy Framework
PIAAC assessment frameworks

Coverage: Facets of Numerate behavior...

1. In a real context...
   - everyday life, work, societal, further learning
2. By responding...
   - 10% identify, locate or access
   - 40% act upon, use: order, count, estimate, compute,
   - 30% interpret, evaluate
   - 20% communicate
3. To mathematical content/ information/ ideas...
   - 30% quantity & number
   - 20% dimension & shape
   - 30% patterns, relationships, change
   - 20% data & chance
4. Represented in multiple ways:
   - objects & pictures
   - numbers & mathematical symbols, formulae
   - diagrams & maps, graphs, tables
   - texts
   - technology-based displays

Common European Numeracy Framework
Numeracy as social practice (NSP)

A **social practice view of numeracy** not only takes into account the different contexts in which numeracy is practised, such as school, college, work and home, but also how people's life and histories, goals, values and attitudes will influence the way they carry out numeracy. (See Oughton, 2013)

- Research-informed by
  - Situated cognition
  - Cultural-historical activity theory (CHAT)
  - Literacy as social practice (LSP)
  - Ethnomathematics

(See Yasukawa et al., 2018)
Implications for a framework

• Acknowledging Numeracy as a social practice

• Levels
  • to define progress as a result of educational interventions
  • to categorize job Implies describing behaviour in a “valued system”
  • to categorize test items
  • to categorize psychological scales
  • ....

• Multidimensional (cognitive and psychological) approach
  • Implies multidimensional individual profiles
Overall levels (= categories ≠ thresholds)

Z Professional use

Co-funded by the Erasmus+ Programme of the European Union
Common European Numeracy Framework

• Content
  • Domains (as in PIAAC, PISA; as in mathematics curricula)
  • Big ideas in Mathematics

• Cognitive processes (higher order skills / 21st century skills)
  • Problem solving, reasoning, modelling, ...

• Affective aspects
  • Attitudes / qualities: self-efficacy, self-confidence, no math anxiety, critical interpretation, ...

• Contexts / Themes /Life
  • Work, daily-life, in house, in society, public domain (politics, media), private domain (shopping, economic domain (money, rent & mortgage, ...)}
## Situational demands

### Context
- Everyday life
- Work-related
- Citizenship
- Further learning
- Finances
- Health and care
- Recreation

### Knowledge and skills
- Quantity and number
- Dimension and Shape
- Pattern, relationships and change
- Data and chance
- Using a calculator
- Using spreadsheets
- Using digital skills

### Cognitive processes

### Attitude
- Self-confidence
- Affection
- Beliefs
- Cooperation
- Flexibility
- Math anxiety
- Learning difficulties

### Higher order skills
- Managing situations
- Analyzing situations
- Processing information
- Reasoning
- Mathematizing
- Problem solving
- Critical thinking

## Aspects of numeracy

### Context

### Content

### Cognitive processes

### Attitude
Individual multidimensional profiles

For each dimension there should be measuring tools: tests, observations, portfolio proofs, self-evaluations, ....

Content
- Quantity + Number
- Space + Shape
- Relationship + Change
- Data + Chance

Other Skills
- ICT skills

Attitude
- Enjoyment
- Perceived importance
- Intrinsic value
- Usefulness
- Confidence in learning
- Math Anxiety

Personality
- Openness to experience
- Conscientiousness
- Perseverance

N.B. Fictional profiles
<table>
<thead>
<tr>
<th>Achievement level and score range</th>
<th>Task descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Below Level 1</strong> 0 - 175</td>
<td>Tasks at this level require the respondents to carry out simple processes such as counting, sorting, performing basic arithmetic operations with whole numbers or money, or recognizing common spatial representations in concrete, familiar contexts where the mathematical content is explicit with little or no text or distractors.</td>
</tr>
<tr>
<td><strong>Level 1</strong> 176 - 225</td>
<td>Tasks at this level require the respondent to carry out basic mathematical processes in common, concrete contexts where the mathematical content is explicit with little text and minimal distractors. Tasks usually require one-step or simple processes involving counting, sorting, performing basic arithmetic operations, understanding simple percents such as 50%, and locating and identifying elements of simple or common graphical or spatial representations.</td>
</tr>
<tr>
<td><strong>Level 2</strong> 226 - 275</td>
<td>Tasks at this level require the respondent to identify and act on mathematical information and ideas embedded in a range of common contexts where the mathematical content is fairly explicit or visual with relatively few distractors. Tasks tend to require the application of two or more steps or processes involving calculation with whole numbers and common decimals, percents and fractions; simple measurement and spatial representation; estimation; and interpretation of relatively simple data and statistics in texts, tables and graphs.</td>
</tr>
<tr>
<td><strong>Level 3</strong> 276 - 325</td>
<td>Tasks at this level require the respondent to understand mathematical information that may be less explicit, embedded in contexts that are not always familiar and represented in more complex ways. Tasks require several steps and may involve the choice of problem-solving strategies and relevant processes. Tasks tend to require the application of number sense and spatial sense; recognizing and working with mathematical relationships, patterns, and proportions expressed in verbal or numerical form; and interpretation and basic analysis of data and statistics in texts, tables and graphs.</td>
</tr>
<tr>
<td><strong>Level 4</strong> 326 - 375</td>
<td>Tasks at this level require the respondent to understand a broad range of mathematical information that may be complex, abstract or embedded in unfamiliar contexts. These tasks involve undertaking multiple steps and choosing relevant problem-solving strategies and processes. Tasks tend to require analysis and more complex reasoning about quantities and data; statistics and chance; spatial relationships; and change, proportions and formulas. Tasks at this level may also require understanding arguments or communicating well-reasoned explanations for answers or choices.</td>
</tr>
<tr>
<td><strong>Level 5</strong> 376 - 500</td>
<td>Tasks at this level require the respondent to understand complex representations and abstract and formal mathematical and statistical ideas, possibly embedded in complex texts. Respondents may have to integrate multiple types of mathematical information where considerable translation or interpretation is required; draw inferences; develop or work with mathematical arguments or models; and justify, evaluate and critically reflect upon solutions or choices.</td>
</tr>
<tr>
<td>Level</td>
<td>Description</td>
</tr>
<tr>
<td>---------</td>
<td>-------------</td>
</tr>
<tr>
<td><strong>A1</strong></td>
<td>Can understand and use familiar everyday expressions and very basic phrases aimed at the satisfaction of needs of a concrete type. Can introduce him/herself and others and can ask and answer questions about personal details such as where he/she lives, people he/she knows and things he/she has. Can interact in a simple way provided the other person talks slowly and clearly and is prepared to help.</td>
</tr>
<tr>
<td><strong>A2</strong></td>
<td>Can understand sentences and frequently used expressions related to areas of most immediate relevance (e.g. very basic personal and family information, shopping, local geography, employment). Can communicate in simple and routine tasks requiring a simple and direct exchange of information on familiar and routine matters. Can describe in simple terms aspects of his/her background, immediate environment and matters in areas of immediate need.</td>
</tr>
<tr>
<td><strong>B1</strong></td>
<td>Can understand the main points of clear standard input on familiar matters regularly encountered in work, school, leisure, etc. Can deal with most situations likely to arise whilst travelling in an area where the language is spoken. Can produce simple connected text on topics which are familiar or of personal interest. Can describe experiences and events, dreams, hopes &amp; ambitions and briefly give reasons and explanations for opinions and plans.</td>
</tr>
<tr>
<td><strong>B2</strong></td>
<td>Can understand the main ideas of complex text on both concrete and abstract topics, including technical discussions in his/her field of specialisation. Can interact with a degree of fluency and spontaneity that makes regular interaction with native speakers quite possible without strain for either party. Can produce clear, detailed text on a wide range of subjects and explain a viewpoint on a topical issue giving the advantages and disadvantages of various options.</td>
</tr>
<tr>
<td><strong>C1</strong></td>
<td>Can understand a wide range of demanding, longer texts, and recognise implicit meaning. Can express him/herself fluently and spontaneously without much obvious searching for expressions. Can use language flexibly and effectively for social, academic and professional purposes. Can produce clear, well-structured, detailed text on complex subjects, showing controlled use of organisational patterns, connectors and cohesive devices.</td>
</tr>
<tr>
<td><strong>C2</strong></td>
<td>Can understand with ease virtually everything heard or read. Can summarise information from different spoken and written sources, reconstructing arguments and accounts in a coherent presentation. Can express him/herself spontaneously, very fluently and precisely, differentiating finer shades of meaning even in more complex situations.</td>
</tr>
<tr>
<td><strong>PROFICIENT USER</strong></td>
<td></td>
</tr>
<tr>
<td><strong>INDEPENDENT USER</strong></td>
<td></td>
</tr>
<tr>
<td><strong>BASIC USER</strong></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Can understand and use simple processes such as counting, sorting, performing basic arithmetic operations with whole numbers or money, or recognizing common spatial representations in concrete, familiar contexts where the mathematical content is explicit with little or no text or distractors.</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>2</td>
<td>Can understand and use basic mathematical processes in common, concrete contexts where the mathematical content is explicit with little text and minimal distractors. Tasks usually require one-step or simple processes involving counting, sorting, performing basic arithmetic operations, understanding simple percents such as 50%, and locating and identifying elements of simple or common graphical or spatial representations.</td>
</tr>
<tr>
<td>3</td>
<td>Can identify and act on mathematical information and ideas embedded in a range of common contexts where the mathematical content is fairly explicit or visual with relatively few distractors. Tasks tend to require the application of two or more steps or processes involving calculation with whole numbers and common decimals, percents and fractions; simple measurement and spatial representation; estimation; and interpretation of relatively simple data and statistics in texts, tables and graphs.</td>
</tr>
<tr>

Learning and teaching in Adult Education

- Learning in meaningful situations
- Learning by doing
- Learning by communication
- Learning by problem solving
- Learning by taking courses
- Reflection

- Facilitate learning situations
- Listen to the learners’ wishes and needs for learning
- Activate prior knowledge
- Coach and support learners
- Encourage learners’ initiatives
- Encourage collaborative learning
Common European Numeracy Framework

• Are we looking for overall levels, e.g. CERF for languages?
  • X1, X2, Y1, Y2, Z1, Z2
  • K1, K2, L1, L2, M1, M2
• Are we looking for profiles (more scores on more dimensions)
• Are we looking at rubrics to describe behaviour?
• Are we looking at “ideal behaviours” on different levels?

• Is there a fruitful relation between levels and self-realization?
